DISASTER RESPONSE

HAZARDOUS MATERIAL INCIDENTS

EMERGENCY MEDICAL SERVICES

ACCIDENT RECONSTRUCTION

DJI ENTERPRISE VALUE

Situational Awareness

First responders often have limited real-time situational awareness in emergency situations, making it challenging to assess the extent of a crisis.

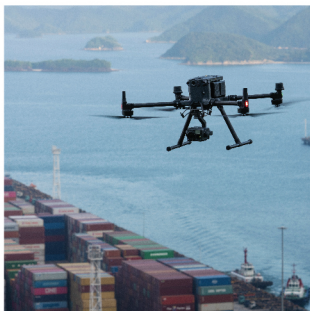

DJI Enterprise offers drones equipped with thermal imaging and high-resolution cameras, providing first responders with real-time aerial views, helping them make informed decisions during emergencies. At the same time drones can see and reach areas that are hard to access.

Rapid Deployment

Traditional response methods can be slow, especially in remote or hard-to-reach areas.

DJI drones can be rapidly deployed, reaching locations quickly and providing immediate assistance or surveillance, reducing response times in critical situations.

Eye in the Sky

Decision-making process often takes time since the information must be brought up first to the higher authorities before a decision can be made

DJI Enterprise drones can be accessed remotely offering a powerful solution for informed, accurate and streamline decision-making processes no matter where the decision maker is.

Search and Rescue

Search and rescue operations can be time-consuming and resource-intensive when conducted manually.

DJI drones equipped with thermal and night vision cameras enable efficient search and rescue operations, especially in low-light conditions, rugged terrain, or large search areas.

DRONE RECOMMENDATION:

- DJI MAVIC 3 THERMAL**
- DJI MATRICE 30 THERMAL**
- DJI MATRICE 350 RTK + H20 Series**
